Facing Global Environmental Change

Environmental, Human, Energy, Food, Health and Water Security Concepts

This policy-focused, global and multidisciplinary security handbook on *Facing Global Environmental Change* addresses new security threats of the 21st century posed by climate change, desertification, water stress, population growth and urbanization. These security dangers and concerns lead to migration, crises and conflicts. They are on the agenda of the UN, OECD, OSCE, NATO and EU. In 100 chapters, 132 authors from 49 countries analyze the global debate on environmental, human and gender, energy, food, livelihood, health and water security concepts and policy problems. In 10 parts they discuss the context and the securitization of global environmental change and of extreme natural and societal outcomes. They suggest a new research programme to move from knowledge to action, from reactive to proactive policies and to explore the opportunities of environmental cooperation for a new peace policy.

Forewords by **R.K. Pachauri**, Chairman, IPCC; **Achim Steiner**, Exec. Director, UNEP; **Joy Ogwu**, former Foreign Minister of Nigeria; **Stavros Dimas**, EU Commissioner for Environment.
